Illustrative concept | Indicative project scope

Avenor

An example of an integrated operational workspace for a growing professional services organisation.

Context

A hypothetical service business may be handling enquiries, appointments, task allocation and follow-ups across separate tools. This concept explores how one connected workflow could reduce fragmentation without assuming that custom software or AI is automatically required.

Objectives

- Map the end-to-end lifecycle from enquiry through completed service and follow-up.
- Identify existing systems and where integrations are more appropriate than replacement.
- Make ownership, exceptions and human approvals visible within the workflow.

Scope of work

- Discovery: review current processes, roles, information sources and practical constraints.
- Enquiry handling: define intake, categorisation, assignment and status tracking.
- Scheduling and tasks: explore coordination of appointments, responsibilities and reminders.
- AI-assisted operations: assess drafting, classification and knowledge retrieval with human approval at sensitive steps.
- Architecture: document identity, permissions, API integrations, data model and audit requirements.

Avenor / Scope continued

Expected or implemented deliverables

- A discovery summary and proposed future-state process map.
- An options assessment covering existing software, integrations and bespoke development.
- A prioritised MVP specification, implementation phases and acceptance criteria.
- Initial architecture, information-security considerations and operational risks.

Boundaries and qualifications

- No representation that Avenor is a commissioned or completed client engagement.
- No live integration, hosted product or measured customer outcome is claimed.
- Budget, timeline and vendor selections require a real discovery engagement.

Document basis

Prepared as an illustrative solution scope demonstrating how kailor approaches business systems and AI-assisted operations.

This document describes a project scope, not a contractual quote, client endorsement or guarantee of results. Commercial delivery, where relevant, requires a separately agreed statement of work.
